

# MATZILLA™

## PREP (Latex/Nitrile gloves & safety glasses are recommended when handling disinfectants.)

**PREP** your MATZILLA system by ensuring you have the following items: microfiber heads, handles & frames, red solution bucket, sealed mop container w/lid, and disinfectant detergent. Place microfiber heads (up to 12) into the grey mop container, and refer to the solution chart on the container lid for the amount of solution that corresponds to the number of heads.

## POUR & PRESS

Fill your red solution bucket with cold water; determine the required amount of water by the number of heads you are using, and fill the bucket to the corresponding numbered fill line. Example: 12 heads require 5qts. of solution (or line #5 in the red bucket) and add 1.5 oz. of disinfectant. Slowly **POUR** your solution evenly over the mop heads and **PRESS** and seal the grey container lid to the grey container base. Flip the sealed container upside down (wheels side up) and wait for 15 minutes to allow the solution to evenly saturate the heads.

**\*\* WAIT 15 mins. while container is upside down, for heads to become evenly saturated.**

## PERFORM

After 15 mins., flip the sealed container back onto its wheels and remove the lid. Remove two of the saturated heads from your bucket and attach them to the MATZILLA frame. The WALLZILLA only requires one mop head. You are now ready to **PERFORM** a proper disinfecting and cleaning of your athletic - facility mats. Use each head until it becomes soiled or starts to dry out. The desired method is to keep solution wet on the mats for 10 minutes in order to properly kill all of the viruses, bacteria, and fungi that may be present. Once you have mopped all of your surfaces, allow them to air dry. Spraying and wiping is not an accepted means of properly disinfecting a contaminated surface.

**\*\*\* Wash soiled heads with standard laundry detergent, DO NOT use bleach or softener.**
